SwipeClock®

Eliminate "buddy punching" today!

PrintReader™ is an add-on biometric device that offers the convenience of "plug and play" hardware with the sophistication of biometric labor tracking.

Because PrintReader™ can be added to your current 330/380, Vx510/570/510G timekeeping solutions (), eliminating the costly expense of "buddy punching" with your current system is simple.

Capturing Employee Punches

PrintReader™ offers the ability to record employee punches in two ways, "verify" and "identify." The default method of "identification" configures the system to recognize and record an employee's punch through a simple fingerprint scan. Alternatively, the "verification" method requires the employee to swipe a card or provide a PIN in addition to a fingerprint scan. The employee's print will then be compared with the PIN or badge card used to record the punch.

Registering Employee Fingerprints

Registering employees on PrintReader™ can be completed within seconds. Your managers are first set up with their own clock-specific manager profile. Administrative features are then accessible via a simple print scan so that managers avoid revealing their administrative password at the clock. Once employee prints are registered on any single terminal, the record is accessible through all other time clocks, enabling the employee to clock in and out from any location.
